V. GOVERNMENT FURNISHED EQUIPMENT LIST	
Block I	
Block II	

INTRODUCTION

The May report incorporates changes to the Block I and Block II standard manned vehicles subsequent to the April report. The change descriptions are included in the current weight status section. The current Block I status is based on the drawing release for CSM 012 and 014, and the Block II status is based on estimated data consistent with the CSM Master End Item Specification, SID 64-1345. The government furnished equipment lists have been revised to reflect a control weight column in addition to a current weight status column. The June report will reflect a control weight column in the current weight status section. The potential weight change section has been modified to include the center of gravity of each item.

The Mission Weight, Center of Gravity and Inertia Summary section reflects the Block I CSM launch weight consistent with a booster payload capability in orbit of 32,500 pounds, as listed in SID 63-313. The entry center of gravity data reflects an unballasted Command Module L/D of 0.38 for Block I and 0.40 for Block II. Studies are in progress to relocate items in the Block II Command Module to constrain the L/D to a nominal value of 0.34 at entry. The Block I and Block II LES status weights have been constrained to the 8200 pound Control Weight with a related LEV burnout center of gravity change from 1125.0 to 1123.4 for Block I pending actual verification by future tests and 1125.0 to 1127.0 for Block II.

The current report reflects a Block II LOR Spacecraft decrease of 280 pounds at injection and 140 pounds at the injected spacecraft condition less Service Module propellant. The current weight of 90,650 pounds is based on a Service Module propellant loading for a specific impulse of 313.0 seconds and a delta V budget as defined in SID 64-1344. The propellant weight also includes a loading tolerance of 210 pounds. A pending change is under consideration to increase the specific impulse of the SPS propellant above 313.0 seconds which reflects the three sigma low value at burnout. The pending change would offset the loading tolerance penalty to the useable propellant.

The LEM weight utilized is 29,500 pounds, excluding crew. Per direction of NASA-MSC via CCA 290, the 32,000 pound LEM is being incorporated into the spacecraft design, however, J. L. Bullard NASA-MSC requested that this change not be reflected in the Block II mass properties summary until the delta V budget with the increased LEM weight is redefined.

The current Block I status reflects an Airframe 012 drawing release based on a 10.6 day EO mission. The major changes in Block I are:

Command Module - Incorporation of potential change item G & N-1 decrease in Guidance and Navigation equipment per current MIT status, COM-1 replacing HF whip antenna with a DeHavilland HF stem recovery antenna, the addition of insulation to the pressure suit plumbing to control condensation and an increase in coax antenna cabling based on calculation of released drawings.

~~CONFIDENTIAL~~ AVAILABLE TO NASA HEADQUARTERS ONLY

Service Module - Incorporation of potential change item MPS-1 addition of external propellant retention screens, STR-2 removing RCS plume heat shields and replacing with cork insulation and an increase in the propellant utilization and gauging system based on vendor actual weights.

Adapter - Decrease in rings at Station 583 and 502 based on actual weights.

The current Block II status reflects an 8.3 day LOR mission. The major changes in the Block II are:

Command Module - Incorporation of potential change items G & N-1 decrease in Guidance and Navigation equipment per current MIT status, EPS-6 deletion of wiring provisions for rendezvous radar, deletion of the teleprinter and a reduction in the main display panel and aft compartment wire supports based on calculations of design layouts.

Service Module - Incorporation of potential change items STR-4, ECS-3, EPS-6 and RR-1 deletion of rendezvous radar equipment, also STR-1 increase of forward bulkhead based on calculation of preliminary layout drawings, ECS-1 increase in the Environmental Control System radiator area based on current system requirements, MPS-1 addition of external propellant retention screens, and an increase in the propellant utilization and gauging system based on vendor actual weights.

Launch Escape System - Consistent with the Flight Dynamics Groups' desire to keep the center of gravity of the Launch Escape Vehicle as far forward as possible, sufficient ballast has been added to bring the Launch Escape System up to the control weight of 8200 pounds.

Adapter - Decrease in rings at Station 583 and 502 based on actual weights.

## TECHNICAL REPORT INDEX/ABSTRACT

PUBLICATION DATE 1 May 1965	CONTRACT NUMBER NAS9-150					
DESCRIPTIVE TERMS						
ABSTRACT <p>The Monthly Weight and Balance Report for the Apollo Spacecraft is filed in accordance with Paragraph 8.10 Exhibit I and is a summary type weight report. This report reflects the current weight of the Block I and Block II manned vehicles and explains the changes in weight from the previous report. This report also reflects the mission weight, center of gravity, inertia summary and dimensional diagrams.</p> <p>For Block I Mass Properties Design Data refer to SID 64-1700, dated 16 October 1964 and for Block II Mass Properties Design Data refer to SID 64-2142, dated 15 February 1965.</p>

COMMAND MODULECURRENT WEIGHT EMPTY CHANGES

	BLOCK I	BLOCK II
<u>STRUCTURE</u>	(+4.0)	(-37.0)
Decrease the main display panel support structure based on calculations of design layouts.	-	-23.0
Decrease the aft compartment wire supports based on calculations of design layout reflecting a new method of routing the smaller wire bundles through the frames in lieu of below the frames.	-	-14.0
Increase the left hand and right hand equipment bays due to loads imposed on the system support platforms by the Apollo checkout equipment.	+4.0	-
<u>STABILIZATION AND CONTROL</u>	(-)	(-4.0)
Decrease the SCS equipment based on Minneapolis-Honeywell status reflecting preliminary calculations for the Block II equipment.	-	-4.0
<u>GUIDANCE AND NAVIGATION</u>	(-13.0)	(-46.0)
Decrease the Guidance and Navigation equipment based on reflecting the current MIT status weights in lieu of the Control Weight allowances. This change incorporates potential item G&N-1, the deletion of the Map and Data Viewer.	-13.0	-46.0
<u>ENVIRONMENTAL CONTROL</u>	(+10.0)	(-)
Increase the pressure suit circuit due to adding insulation on the plumbing that normally functions at temperatures low enough to cause condensation, based on free condensate control requirements.	+10.0	

COMMAND MODULECURRENT WEIGHT EMPTY CHANGES

	BLOCK I	BLOCK II
<u>ELECTRICAL POWER</u>	(+1.0)	(-9.0)
Increase the master event sequencer control based on changes required to eliminate a potential single point failure hazard.	+1.0	+1.0
Decrease wiring provisions due to deleting rendezvous radar equipment per CCA 303. This change incorporates potential item EPS-6.	-	-10.0
<u>COMMUNICATIONS</u>	(+7.0)	(-9.0)
Increase the C-band and S-band transponders due to revised estimates based on actual weights of the Command Module 006 equipment per current Collins status.	+1.9	-
Delete the teleprinter consistent with NASA direction per TWX-W3031MA.	-	-9.0
Increase the antenna coax and connectors based on calculated in lieu of estimated weights per current released drawings.	+7.1	-
Decrease the HF antenna due to utilizing the HF stem recovery antenna from DeHavilland in lieu of the HF whip antenna. This change incorporates potential item COM-1.	-2.0	-
<u>CONTROLS AND DISPLAYS</u>	(+1.0)	(+5.0)
Increase the SPS control panel based on current vendor status weights.	+1.0	+1.0
Increase the lighting controls due to revised estimates based on current lighting requirements for the Block II vehicle.	-	+3.2
Delete the teleprinter control panel consistent with NASA direction per TWX-W3031MA.	-	-0.8
Add a mounting panel to support the relocated circuit breaker and timers at the location previously occupied by the map and data viewer.	-	+1.6
<u>TOTAL COMMAND MODULE CURRENT WEIGHT CHANGES</u>	<u>+10.0</u>	<u>-100.0</u>

SERVICE MODULECURRENT WEIGHT EMPTY CHANGES

	BLOCK I	BLOCK II
<u>STRUCTURE</u>	(+1857.0)	(+1599.0)
Decrease the insulation due to removing RCS plume heat shields and adding cork sheet for thermal protection against RCS engine boost heating. This change incorporates potential item STR-2.	-5.0	-
Increase the forward bulkhead based on calculations of preliminary layout drawings. This change incorporates potential item STR-1.	-	+16.0
Delete the support structure for the rendezvous radar installation per CCA 303. This change incorporates potential item STR-4.	-	-23.0
Delete the splice frame in sector IV due to designing this sector as one panel in lieu of two panels as a result of design review at the drawing board level.	-	-4.0
Transfer the fuel, oxidizer and pressurization tanks from the Main Propulsion System due to recoding consistent with system design responsibility.	+1862.0	+1619.0
Decrease the aft bulkhead due to deletion of the 0.10 inch thick shim on the Service Module at Station 838 per current Block II configuration.	-	-9.0
<u>ENVIRONMENTAL CONTROL</u>	(-)	(+29.0)
Increase the ECS radiators from 90 square feet to 148 square feet based on prereleased drawings reflecting current system requirements. This change incorporates potential item ECS-1.	-	+32.0
Delete the cooling provisions for the rendezvous radar equipment per CCA 303. This change incorporates potential item ECS-3.	-	-3.0
<u>INSTRUMENTATION</u>	(-)	(-2.0)
Decrease the radiation detection system based on revised procurement specification weights.	-	-2.0
Increase the flight qualification sensors based on revised estimate of current sensor and signal conditioner weights.	+2.0	

SERVICE MODULECURRENT WEIGHT EMPTY CHANGES

	BLOCK I	BLOCK II
<u>ELECTRICAL POWER</u>	(+12.0)	(+2.0)
Increase the fuel cell based on Pratt and Whitney status reflecting actual weight of the insulation.	+2.1	+2.1
Add a fuel cell remote control panel required by the Pratt and Whitney fuel cell load sharing control change.	+5.5	+5.5
Add a cryogenic control box due to redesign of the cryogenic system valve module pressure switches to meet reliability requirements.	+3.6	+3.6
Decrease the radiators on the Block II vehicles due to relocation to the fairing and reducing the size from 63 square feet to 40 square feet based on current Block II requirements.	-	-7.0
Increase the power distribution box based on calculation of miscellaneous drawing changes.	+0.8	+0.8
Delete the wiring provisions for the rendezvous radar equipment per CCA 303. This change incorporates potential item EPS-6.	-	-3.0
<u>MAIN PROPULSION</u>	(-1811.0)	(-1568.0)
Transfer the fuel, oxidizer and pressurization tanks to Structure due to recoding consistent with system design responsibility.	-1862.0	-1619.0
Increase the fuel and oxidizer system due to adding dual propellant retention screens external to the existing reservoirs to increase the reliability of the SPS. This change incorporates potential item MPS-1.	+38.0	+38.0
Increase the propellant utilization and gauging system based on end item actual weight for the oxidizer and fuel probes and controls.	+19.0	+19.0
Decrease the engine based on Aerojet status reflecting average actual weights of three nozzles.	-6.0	-6.0

SERVICE MODULECURRENT WEIGHT EMPTY CHANGES

	BLOCK I	BLOCK II
<u>COMMUNICATION AND RENDEZVOUS RADAR</u>	(-)	(-80.0)
Delete the rendezvous radar equipment per CCA 303. This change incorporates potential item RR-1	-	-80.0
<hr/>		
<u>TOTAL SERVICE MODULE CURRENT WEIGHT CHANGES</u>	+60.0	-20.0

LAUNCH ESCAPE SYSTEMCURRENT WEIGHT CHANGES

	BLOCK I	BLOCK II
<u>STRUCTURE</u>	(-1.0)	(-1.0)
Decrease the tower structure based on calculation of miscellaneous drawing changes.	-1.0	-1.0
<u>SEPARATION PROVISIONS</u>	(-1.0)	(-1.0)
Decrease the separation provisions based on calculation of miscellaneous drawing changes.	-1.0	-1.0
<u>PROPULSION SYSTEM</u>	(-1.0)	(-1.0)
Decrease the jettison motor per Thiokol status reflecting average actual weights.	-1.0	-1.0
<u>BALLAST</u>	(+3.0)	(+63.0)
Increase the ballast to the control weight limit of 8200 pounds to provide maximum forward center of gravity of the LEV at burnout.	+3.0	+63.0
TOTAL LAUNCH ESCAPE SYSTEM CURRENT WEIGHT CHANGES	-	+60.0

ADAPTERCURRENT WEIGHT CHANGES

	BLOCK I	BLOCK II
<u>STRUCTURE</u>	(-20.0)	(-20.0)
Decrease the rings at Station 583 and 502 based on actual in lieu of calculated weights.	-20.0	-20.0
<hr/>		
TOTAL ADAPTER CURRENT WEIGHT CHANGES	-20.0	-20.0

COMMAND MODULE

POTENTIAL WEIGHT CHANGES

ITEM	BLOCK I WEIGHT	BLOCK II WEIGHT	CENTER OF GRAVITY			EFFECTIVE DATE
			X	Y	Z	
<u>STRUCTURE</u>	(+37)	(+37)				
Increase the flotation system based on evaluation of current system requirements which necessitate rigid canisters with related latching. (Item STR-3, Dtd. 2-1-65)	+20	+20	1085.7	-4.5	9.5	6-1-65
Increase the inner structure forward section due to adding bonded doublers to the forward cylinder base_ on current impact criteria. (Item STR-5, Dtd. 4-1-65)	+17	+17	1094.5	0.0	-1.6	6-1-65
<u>CREW SYSTEM</u>	(+2)	(+2)				
Increase the pressure suit assembly electrical umbilical based on actual weights of prototype item. (Crew-2, Dtd. 4-1-65)	+2	+2	1054.4	-8.7	-5.8	6-1-65
<u>ENVIRONMENTAL CONTROL</u>	(+85)	(+7)				
Add water for the cooling during earth orbit based on the inability of the radiators to supply sufficient cooling. (Item ECS-1, Dtd. 10-1-65)	+78	-	1022.6	-33.0	39.7	7-1-65
Add a suit compressor inverter to the pressure suit circuit due to Block II requirements to maintain an oxygen flow of 12 CFM/Man in lieu of 10 CFM/Man in a 3.5 psia (suited) condition per current specification requirements. (Item ECS-4, Dtd. 4-1-65)	-	+5	1027.8	-48.3	5.5	8-1-65
Modify the pressure suit heat exchanger evaporator per CCA 308 (Item ECS-5, Dtd. 5-1-65)	+2	+2	1027.8	-48.3	5.5	8-1-65

COMMAND MODULE

POTENTIAL WEIGHT CHANGES

ITEM	BLOCK I WEIGHT	BLOCK II WEIGHT	CENTER OF GRAVITY			EFFECTIVE DATE
			X	Y	Z	
<u>ENVIRONMENTAL CONTROL</u> (Continued)						
Incorporate a cabin water separator to prevent water accumulation. (Item ECS-6, Dtd. 5-1-65)	+5 (+5)	- (+5)	1027.8	-48.3	5.5	8-1-65
<u>INSTRUMENTATION</u>						
Add a runaway RCS engine detection unit to detect possible failures within the RCS and RCS. (Item Instr.-2, Dtd. 1-1-65)	+5 (+100)	+5 (+100)	1050.0	0.0	-25.0	8-1-65
<u>ELECTRICAL POWER SYSTEM</u>						
Increase wire installation provisions such as strings, clamps and varnish based on revised estimates of Airframe 009 requirements. (Item EPS-7, Dtd. 5-1-65)	+40 - +60 -	- +40 - +60 -	1035.0 1036.3 1035.0 1036.3 (+19)	5.1 3.3 5.1 3.3 (+19)	-20.0 20.0 -7.1 15.2 (-5.6)	6-1-65 6-1-65 6-1-65 6-1-65 6-1-65
<u>REACTION CONTROL SYSTEM</u>						
Add a vent line to each fuel and oxidizer tank to increase the service life by reducing cycling of bladder during fill and drain operations. (Item RCS-1, Dtd. 2-1-65)	+4	+4	1022.6	-5.6	57.0	6-1-65
Incorporate an RCS rapid fuel dumping system. (Item RCS-2, Dtd. 5-1-65)	+15	+15	1022.6	-5.6	57.0	8-1-65

COMMAND MODULE

POTENTIAL WEIGHT CHANGES

ITEM	BLOCK I WEIGHT	BLOCK II WEIGHT	CENTER OF GRAVITY			EFFECTIVE DATE
			X	Y	Z	
<u>COMMUNICATIONS</u>	(+21)	(+6)				
Increase the TV camera and equipment based on current estimates for the current GFE design. (Item COM-2, Dtd. 5-1-65)	-	+6	1064.7	14.3	-6.3	8-1-65
Add real time radio command relays to provide additional capability for MSFN to command certain spacecraft functions. (Item COM-3, Dtd. 5-1-65)	+14	-	1036.0	18.1	30.2	8-1-65
Incorporate an additional VHF transmitter required for flight qualification data. (Item COM-4, Dtd. 5-1-65)	+7	-	1030.0	44.0	-2.0	8-1-65
<u>CONTROLS &amp; DISPLAYS</u>	(+7)	(+7)				
Add radiation detection provisions. (Item C&D-3, Dtd. 1-1-65)	+2	-	1066.0	0.0	-20.0	9-1-65
Increase the crew compartment flood lighting based on a calculation of current drawings reflecting a change to fluorescent in lieu of incandescent light and an increased quantity. (Item C&D-4, Dtd. 5-1-65)	+5	+5	1060.0	0.0	0.0	6-1-65
Incorporate display functions of the launch vehicle oxidizer pressure. (Item C&D-5, Dtd. 5-1-65)	-	+2	1066.0	0.0	-20.0	8-1-65
<u>TOTAL COMMAND MODULE POTENTIAL WEIGHT CHANGES</u>	+276	+183				

SERVICE MODULEPOTENTIAL WEIGHT CHANGES

ITEM	BLOCK I WEIGHT	BLOCK II WEIGHT	CENTER OF GRAVITY			EFFECTIVE DATE
			X	Y	Z	
<u>STRUCTURE</u>	(+19)	(-17)				
Add support structure for supplemental water supply system required for extended earth orbital missions (Item STR-3, Dtd. 4-1-65)	+12	-	916.0	-22.5	41.9	7-1-65
Replace the thixotropic paste of core edges with foaming paste in the fuel bay areas of the aft bulkhead based on current allowables. (Item STR-5, Dtd. 5-1-65)	-	-17	839.5	0.0	0.0	7-1-65
Add edge isolating material to the ECS radiators. (Item STR-6, Dtd. 5-1-65)	+7	-	893.4	0.0	0.0	8-1-65
<u>ENVIRONMENTAL CONTROL SYSTEM</u>	(+150)	(-)				
Add a water supply storage system (includes 112 pounds of water) to be used as a supplement to the existing Command Module ECS waste water supply during extended earth-orbital flights. The mission duration cannot be fulfilled with present ECS heat rejection capabilities. (Item ECS-2, Dtd. 4-1-65)	+150	-	925.0	-22.5	41.9	7-1-65
<u>INSTRUMENTATION</u>	(+3)	(-)				
Add radiation detection provisions. (Item Instr.-2, Dtd. 1-1-65)	+3	-	993.8	61.5	35.8	9-1-65

SERVICE MODULE

POTENTIAL WEIGHT CHANGES

ITEM	BLOCK I WEIGHT	BLOCK II WEIGHT	CENTER OF GRAVITY			EFFECTIVE DATE
			X	Y	Z	
<u>ELECTRICAL POWER</u>	(+73)	(+75)				
Increase wiring provisions based on pottng connectors due to humidity requirements. (Item EPS-2, Dtd. 11-1-64)	+15	+15	943.9	-0.9	-1.2	6-1-65
Increase fuel cell based on the addition of start-up potassium hydroxide wetting agent. (Item EPS-4, Dtd. 2-1-65)	+8	-	860.4	-33.1	42.0	7-1-65
Increase wire installation provisions such as strings, clamps and varnish based on revised estimates of Airframe 009 requirements. (Item EPS-7, Dtd. 5-1-65)	+20	-	964.8	-33.1	42.7	7-1-65
Increase wiring based on revised lengths. (Item EPS-8, Dtd. 5-1-65)	+30	-	943.9	-0.9	-1.2	6-1-65
Add wiring provisions for launch vehicle oxidizer pressure display function. (Item EPS-9, Dtd. 5-1-65)	-	+30	957.5	-8.5	18.7	6-1-65
<u>PROPELLION SYSTEM</u>	(+20)	(+20)	957.5	-8.5	18.7	8-1-65
Modify SPS engine to use pneumatic action for the propellant valves to meet Apollo requirements for reliability and start or shutdown impulse accuracy. (Item MPS-2, Dtd. 1-1-65)	+20	+20	873.0	0.0	0.0	6-1-65
<b>TOTAL SERVICE MODULE POTENTIAL WEIGHT CHANGES</b>	<b>+265</b>	<b>+78</b>				

ADAPTERPOTENTIAL WEIGHT CHANGES

ITEM	BLOCK I WEIGHT	BLOCK II WEIGHT	CENTER OF GRAVITY			EFFECTIVE DATE
			X	Y	Z	
<b>STRUCTURE</b>						
Add auxiliary (GSE) work platform provisions at Station Xa 525 per NASA Letter 14292MA, dated 11-19-64. (Item ADP-2, Dtd. 3-1-65)	(-)	(+144)				
Revise access hold sizes and quantity per RECP No. CSM 64-21. (Item ADP-3, Dtd. 3-1-65)	-	+5	525.0	0.0	0.0	6-1-65
Increase size of SLA-LEM +Z access door per RECP No. CSM 65-7. (Item ADP-4, Dtd. 3-1-65)	-	+32	603.2	0.0	0.0	6-1-65
Add a retracting capability for the SLA-LEM Umbilical mechanism to provide clearance for withdrawal of the LEM when the panels are deployed at 45 degrees. (Item ADP-5, Dtd. 3-1-65)	-	+20	634.5	0.0	108.2	6-1-65
Increase the aft section honeycomb panel face sheets based on increased LEM weight consistent with CCA 290. (Item ADP-10, Dtd. 4-1-65)	-	+5	642.0	110.0	-27.0	6-1-65
Add backup structure for the 45° SLA panel deployment requirement per CCA 304. (Item ADP-12, Dtd. 5-1-65)	-	+58	541.8	0.0	0.0	7-1-65
<b>ELECTRICAL POWER</b>						
Increase electrical provisions to provide for mounting the LEM pyrotechnic sequencer system on the SLA. This item includes boxes, structure and wire. (Item ADP-6, Dtd. 3-1-65)	-	+24	585.0	0.0	0.0	6-1-65
